Interdisciplinary Centre for Clinical Research

Prof. Dr. Peter Walter
Speaker of the Steering Committee

Karen De Bruyne, M.A.
Coordinating Executive Officer

Strengthening research
Funding excellence
Networking by infrastructure
Convincing by quality
The Interdisciplinary Center for Clinical Research (IZKF) is the development and strategy program of the RWTH Aachen faculty of medicine, with the task to strengthen translational medical research that stems from its basic research and clinic: By supporting top-quality projects, it strives to greatly improve the chances for solving major and highly challenging problems in biomedicine and life science.

The IZKF functions as an initiator with vision: funding tools are modified in accordance with current requirements, thereby exploring different approaches. The IZKF has a major influence on the research portfolio of the faculty of medicine. By specifically defining the research focus areas, the IZKF concentrates expertise and provides the basis for the acquisition of third-party-funded collaborations. It represents well established structures that are in an excellent position to face the current and future challenges of clinical research.

**Joint Projects - thematically directed towards the faculty’s research focus areas**

The IZKF places utmost importance on funding high-quality innovative joint research projects. All project applications are subject to an external peer review process, that guarantees the credibility of the underlying science and fosters a transparent and verifiable allocation of funds. The review process results in a high level of acceptance among the applicants and in the faculty of medicine. Furthermore, the funded projects are subject to a result-oriented internal evaluation.

**Research Groups - group management for young, excellent researchers**

The IZKF offers an attractive funding possibility for scientists with outstanding achievements through its research groups: The research groups are assigned to an institute or department and independently work there. The heads of the groups possess excellent scientific qualifications and experience in acquiring external funding. They are as well externally reviewed on the basis of their scientific excellence, strategical fitting accuracy and their potential to strengthen the faculty’s research focus areas.

---

**Core Facilities – Technologies, equipment and expertise for ambitious research goals**

The Interdisciplinary Center for Clinical Research (IZKF) provides valuable resources for a cost-effective, high-quality research environment.

A wide range of technologies and state-of-the-art equipment are available for all RWTH Aachen University researchers. Experienced technology experts provide services at every stage of the research process, including experimental design, method development, sample work-up, and data interpretation, on a partial cost recovery basis.
